

# Okta as SSO provider for Worklytics

The Worklytics App for Okta provides Single Sign-On (SSO) user authentication to access Worklytics, so you can use the credentials for your company's organization in Okta to log into your Worklytics account.

## Background

---

The Worklytics platform collects and analyzes *workplace data* at the instruction of Customer Organizations on their behalf, in accordance with our [Privacy Policy](#), [Terms of Service](#), and any customer agreement / laws / regulations which may supersede those terms. The Customer Organization remains the controller of this data and may instruct Worklytics to halt processing and destroy it at any time.

## Prerequisites

---

In order to add Okta as SSO provider, you have to be an administrator of your Worklytics account to complete the installation. You also need administrator rights of your Okta organization. If you don't have a Worklytics account, you can [sign up here](#) or contact our [support team](#) to get information on how to proceed.

## Supported Features

---

The current version of the Worklytics App for Okta, supports **Service Provider Initiated (SP-initiated) SSO**. This option gives your end-users the ability to log into the [Worklytics Login page](#) using their Identity Provider credentials (your company's organization in Okta).

## How to integrate Worklytics with Okta SSO

---

### Step 1: Add Worklytics App to Okta

1. Log in to Okta as an Administrator.
2. In your end-user dashboard, click **Admin**.
3. Choose **Applications** then click on **Add Application**.
4. In the **Search for an Application** field, search for "Worklytics". When Worklytics' Okta-Verified OIDC appears, click on **Add**.
5. Now, on the **General Settings** page, you can type a name for the new application. For example: "Worklytics".
6. Click **Next**.
7. Use the option **Assign to People**, to assign those users that you want to have access to your Worklytics account.
8. Click **Done**.

### Step 2: Configure Okta as Identity Provider in Worklytics

1. Log in to Worklytics as an Administrator.
2. In the navigation menu, click **Settings**
3. Choose the **Access Control** tab.
4. Now, in the "Identity Providers" section, click on **Add Identity Provider**
5. You will be prompted with different options, choose **Okta**.

6. Complete the configuration by entering the following values that you'll find on the "General" tab of the Worklytics application in Okta:
  - o **Client ID**
  - o **Client secret:** this is a private value that you must not share with anyone else.
  - o **Okta domain**
7. If you've completed the previous step (**step 1**) you'll be authenticated and redirected to Worklytics.
8. If everything went OK, you'll see a new entry in the "Identity Providers" section of the **Access Control** tab, and your end users can log into Worklytics using their email address.

If any doubts, contact our [support team](#).
